

Installation Instructions for Vortex Water Energisers

Tap water can be toxic, repulsive, dead, low on energy, flat and lacking "flavour" in ways we only notice when we put life back into it and taste the difference.

A Vortex Water Energiser pointed at a water pipe and tied in place transfers energy from the Energiser and into water. The Energiser gives the water inside the pipe increased spin that is tasted as aliveness and seen as sparkle and oxygenation.

Increased spin is by its nature increased energy and frequency and involves changes in weight and levitation. Unlikely as it may seem, until it is tasted, Energiser water does feel lighter and more uplifting to drink or shower with.

Water use spin and energy to cleans itself naturally in rocky, mountain streams. Viktor Schauberger describes how water cleans itself, tumbling over and around rocks and how it loses energy forced into straight pipes and held in water tanks.

Schauberger's understanding of the levitation furthered the development of space-craft propulsion in the 1940s and 50s. His and Nikola Tesla's work were discredited by a military-industrial complex that wanted to use it to their own advantage and so ridiculed ideas of abundant, free energy, such as aether, even though Einstein, Bohr and other scientists agreed on its existence in the early 1900s. The Michelson-Morely aether experiment did not disprove the aether as claimed. Sympathetic vibration and resonance have been poorly understood since then.

It is up to the reader to decide what truth is, based on the changes they experience in their water, without putting accepted science ahead of results they achieve. Those installing Vortex Water Energisers might find a rocky stream to observe and see that the rocks are vibrating to the pulse of the water and transferring energies that they receive from the water back to the water.

High frequency energy water dancing, cleansing, energising and streaming itself through mountain forests has been lovingly reproduced using water eggs and large Vortex Water Energisers. Water holding this energy is placed inside the hollow copper tubes of each of our Energisers and Harmonisers.

Appreciation of this energy transfer actually makes our Energisers and Harmonisers even more effective not because, as Masaru Emoto established, water readily responds to the thoughts, feelings and belief systems of those around it, but because the water in the Energiser actually has enough energy to respond to what you ask it to do!

The bio-energy field of the Vortex Energiser can be strong enough to increase the energy frequencies of a whole house or apartment, if all its energy is not needed to improve the water.

This high energy water is held in by rivets. Freezing Energisers and Harmonisers will expand the water and may pop the rivets causing leakage of the water and loss of much of this ability.

The spiral itself acts as flow form drawing in earth energies, detoxifying damaging environmental energies such as EMF and WiFi, and transmits a healthy, transformative, bio-magnetic energy field for home, person, water, air and food. However without high-energy water inside it an Energiser or Harmoniser would be very much like an empty pyramid, powerful but not as powerful as once was.

Benefiting from the Vortex Energiser before Installing it

The Vortex Energiser (approx 20cm in height and 18cm in diameter) or in the case of the larger Industrial size (approx 23cm by 19.5cm) is spirals of copper tubing containing highly energised water that gathers energy into vortices in a process known as implosion and uses this energy as nature does to energise, cleanse and revitalise water.

The special water, and its shape, makes the Vortex Energiser a cosmic antenna and amplifier which takes its energy directly from the quantum source field or ether, a subtle form of energy that is all around us.

No electrical power supply is required. Just placing the Vortex Water Energizer beside ordinary "lifeless" water causes it to become charged and healthy again. Direct contact with water is not necessary as the energy is transferred by way of vibration and resonance, similar to one tuning fork picking up the vibration of another tuning fork, even if the first one has not been vibrated.

Before you tie the Vortex Water Energizer to your water mains pipe, we recommend you first use it on all closed heating and cooling systems, such as the car, central heating, fridge and freezer. Because these are closed systems 24 hours is usually enough time to transfer all the energy needed before the Energiser is used elsewhere.

Attachment to Heating and Cooling Systems

To energize a central heating system lay the Vortex Energizer on the floor with the apex pointing at and touching a pipe coming down from one of the radiators. Leave the Vortex Energizer in this position for 24 hours, preferably with the heating on. This will ensure that the energy is taken on by the whole system.

You may like to do the same with your fridge and freezer. All food contains water and will benefit from being energized. This has shown to improve the taste and prolong the life of food and drinks. Simply put the Vortex Water Energizer in the fridge for 24 hours to transfer the energy to food stored within the fridge and to the cooling system. The energized cooling system will ensure that new food coming into the fridge will be energized even after the Vortex Energiser has been removed. You may also leave the Vortex Water Energizer touching one of the cooling pipes coming from the compressor for 24 hours.

Do not place the Vortex Energiser in the freezer. Freezing does not affect the performance of the Vortex Water Energizer but may result in the rivets (which seal the pipe ends) being forced out by the expanding water.

Cars, Spas, Ponds and Swimming Pools

You may carry out the same procedure with your car's cooling system or even submerge the Vortex Energizer in your garden pond or swimming pool. An energized car cooling system transfers life force into the car cabin via the heat exchanger.

Energising Your Self

You may also keep it near you for a day and night to increase your bio-energy field. After you have done so drinking vortex structured water will maintain a now stronger, healthier energy field and give you a continued degree of protection from surrounding energies.

You don't have to do a whole 24 hours. If you find having it near you too intense reduce the amount of time or take rests away from it. Wearing a personal Harmoniser pendant and having a large EMF Space Harmoniser in your home and workplace will allow your body to change more gradually.

To give you more energy (if you want it) and to further protect you from outside influences we recommend wearing a personal Harmoniser pendant and having EMF Space and Room Harmonisers in your home and workplace. The latter are best placed near WiFi routers, phones or on the side of home between where people most are and smart meters, transformers, cell towers, motorways and neighbouring apartment blocks.

Attachment to Main Water Supply Pipe

After you have used it near you and in the rest of the house we recommend that you attach the Vortex Energizer permanently to the pipe bringing in all your water or after your drinking water filtration system. You need the Vortex Energizer here at all times to ensure that new incoming water becomes energised. For maximum efficiency the Vortex Energizer needs to be fixed to the main pipe in such a way

that its apex is in direct contact with the pipe. The two straps provided are used to tie the apex and a lower winding of the Vortex Energizer to the pipe. Point it in the direction of water flow.

This method of attachment works equally well for vertical and horizontal pipes. The spiral draws energies in and transfers them to the water through both its tip and spirals. The most effective position can be to have the inside (concave) curve of the tip touching the pipe. Do what feels best.

In some types of accommodation, there may be more than one mains water supply pipe and pipes may be less accessible. In this case attach them right on pipes before taps and shower heads if you have room to do so. If you can't do this suspend a Vortex Water Energizer in the middle of bathroom or kitchen and/or with flat 3 spiral Room Harmonisers near to each device.

The Vortex Water Energizer works through any type of pipe, metal or plastic. Narrow pipes with a joiners can be opened and passed through the centre of the Vortex Water Energizer.

The 20 x 18cm size is usually enough for pipes up to 20mm in diameter. Larger diameter pipes can have more than one Energiser or an Industrial Vortex Energiser. The latter is usually enough for water pipes up to 30 - 40 mm in diameter. It is about twice the weight (approx 800g) and has about 3 times the strength. Tarnishing of the copper does not affect the function of either in any way.

Allow 30 minutes of attachment after installation for water standing in the pipe to start being changed noticeably. The stronger the earth energies are where your building is located, the higher the initial quality of your water and the fewer damaging man-made energies there are in your home and neighbourhood the faster you will notice effects. Up to 2 hours has been needed in some situations.

Other Harmonisers and Energisers in the home help Vortex Water Energisers to be more effective.

Alternative uses include: Septic Tanks - some have not needed emptying for 20 years or more. Land Energisers - may increase grass, crop and meat production two-fold or need half the water or fertiliser. Clinic Energisers - used on the body for health improvement at home and professionally. There are as uses are as many as you can imagine.

These photographs taken by Prof. David Schweitzer through a phase contrast darkfield microscope at 4000x magnification show changes to the micro cluster structure as a result of being energised with the Vortex Water Energizer. On the left is untreated London tap water. Schweitzer attached the Energiser to the pipe just before the tap, through which he let tap water run for 10 minutes after which he drew a sample of water from the tap, which produced the middle and right images clearly showing the increased structure and more vibrant biophoton emissions of increased life energy.

Biophotons are molecular light emissions, which according to Prof. Fritz Popp, regulate cell growth and regeneration as well as controlling all biochemical processes.

After his tests Prof. Schweitzer commented:

"Now, as you can see on the images, it is beyond words! The beauty, color and structure are unparalleled to anything I have ever seen. I personally cannot explain, how and why this transformation of the water clusters has been so dramatic after applying the Vortex Energizer. There are two main cluster structures that appear after letting the water run for 10 minutes through the Energiser field. It is the branch shape and some geometric shapes of a very unusual kind. It is apparent that these two shapes represent the female and male, respectively. I have never seen water samples which contains both these shapes before. This is very balanced water. I used the tilting of 1.12 degrees of the table, 4000X computer enhancement, polarizing filter, with 820 NM light source."

Independent tests by the Biofield Laboratory in Vienna have shown that the physical properties pH and conductivity of water change in a subtle way with energization. In some tests the pH of acidic bi-distilled water was raised towards the 'normal' region of pure water. These changes appear to be a direct result of the clustering of the molecules in the presence of increased energy.

Minerals may be dissolved into highly charged colloidal particles or transported inside clusters of liquid crystalline water molecules created by hydrogen bonding. This may explain why many people experience a reduction in the taste of chlorine and hardness with a Vortex Energiser. Transformation of toxic chemicals in some way makes them less harmful, though they are not actually eliminated. BOVIS values suggest that once a high enough spin energy is transferred to toxics they are no longer absorbed and at higher frequencies they may even be transmuted. Highly-energized water also strengthens the immune system helping the body to handle toxic substances without harm. This Kirlian photograph shows a highly charged, beautifully structured energy state attained after Energiser exposure.

My kinesiology (muscle tests), confirm water undergoes favourable changes in pH, oxygenation, hydrogen content, micro-vortex energy content, BOVIS, ORP (oxygenation-reduction potential), viscosity (smoothness), dissolves dirt and minerals more and increases the nutritional value and healing power of foods, drinks, homeopathics, gem essences and natural medicines - David Baillie, 2017
